DETAILED ACTION

Allowable Subject Matter

1. Claims 1-18 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record neither discloses nor teaches that a LCD device driving input line structure comprising various elements as claimed, more specifically, as the following:

in the driving line input region, a pixel electrode on the passivation layer to electrically connect the first, second and third line layers through each contact hole, and the first, second and third layers providing signal to driver ICs, and each driver ICs applying output signals to gate lines or data lines [claims 1 and 13; as shown in Figs.4-5];

The closest references such as US 5,523,866 (Morimoto et al) and US 2002/0101398 (Fujita) discloses that the pixel electrode connected to drain electrode and a contact serves to connect the gate line to the gate electrode, and a contact hole serves to connect the drain terminal to drain electrode, and all of the contact hole functions as the connection in the cell array region, but the references do not disclose the contact holes functions as the connection in the drive input region as claimed, such as the first, second and third line layers through contact holes to connect pixel electrodes to providing signals from the driver ICs.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
